iCloud - EventKit: Locations

May 2019

File name Locations.xml

File description This file contains recently and frequently-used event locations from the user's Calendar.

Why Apple keeps this information Apple retains this information in order to sync recently and frequently used locations across the user's iCloud devices and to suggest more relevant locations when the user edits an event.

Field Name	Details
Address	The location's street address
Name	The location's name
